Customizable Glowforge Cut Acrylic Bubble Wand (Free Download)
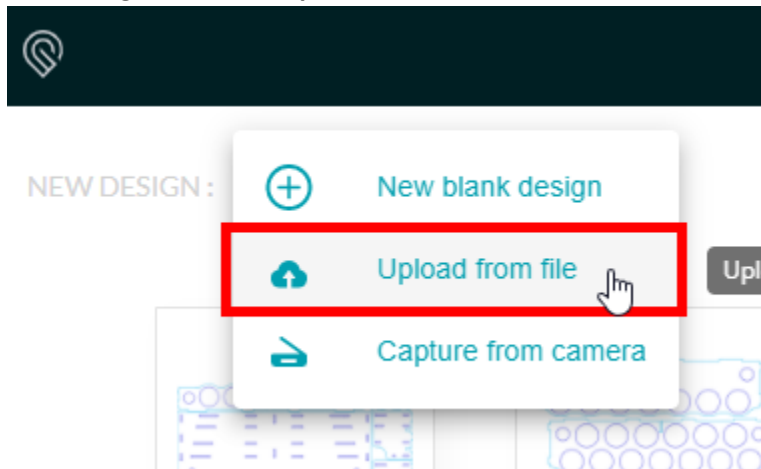

This guide uses the bubble wand download from my website
https://ragingcomputer.com/2021/06/28/customizable-glowforge-cut-acrylic-bubble-wand-free-download/
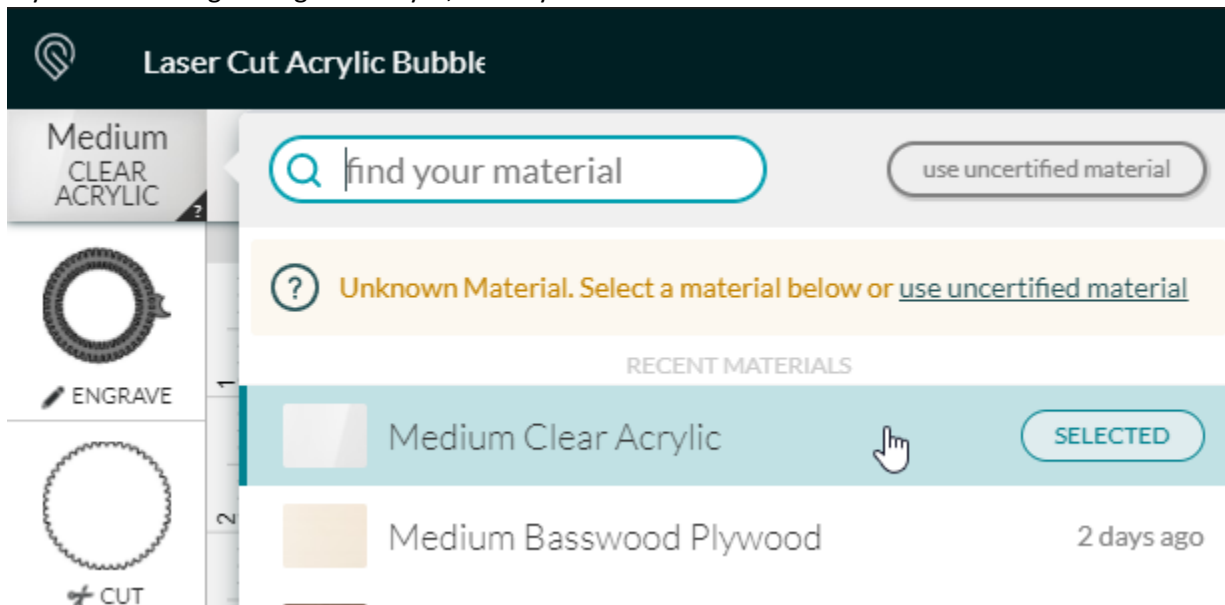

In the Glowforge App with Glowforge Premium
New Design: **Create** -> **Upload from file**

Select the Laser Cut Acrylic Bubble Wand SVG with the diameter you want to use. I've had the best luck with 30mm
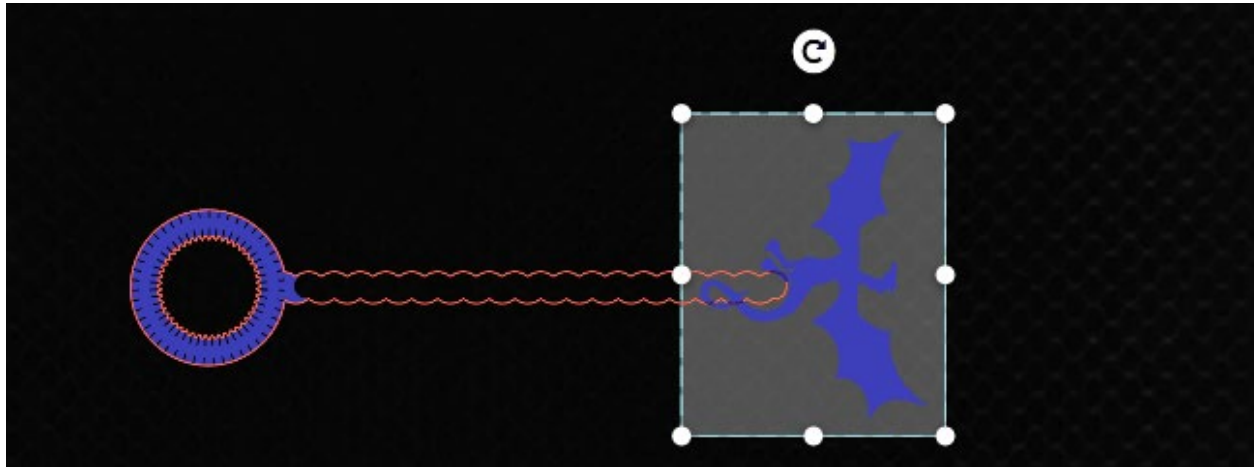

If you aren't using Proofgrade Acrylic, select your material.

Using the giant plus (Import Artwork) button, search for something and pick a cool icon
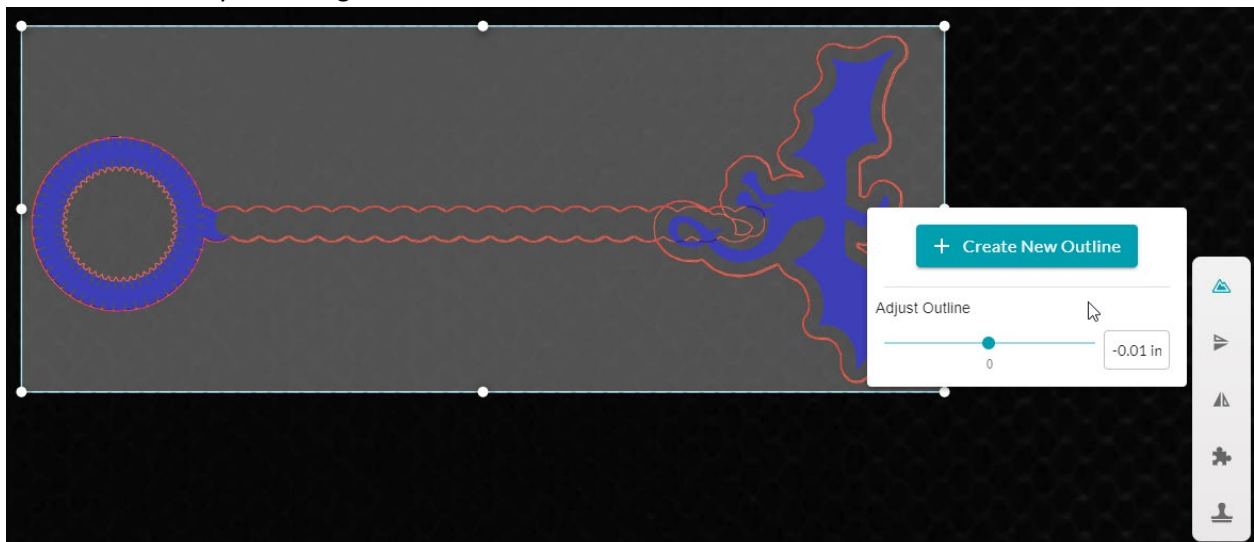

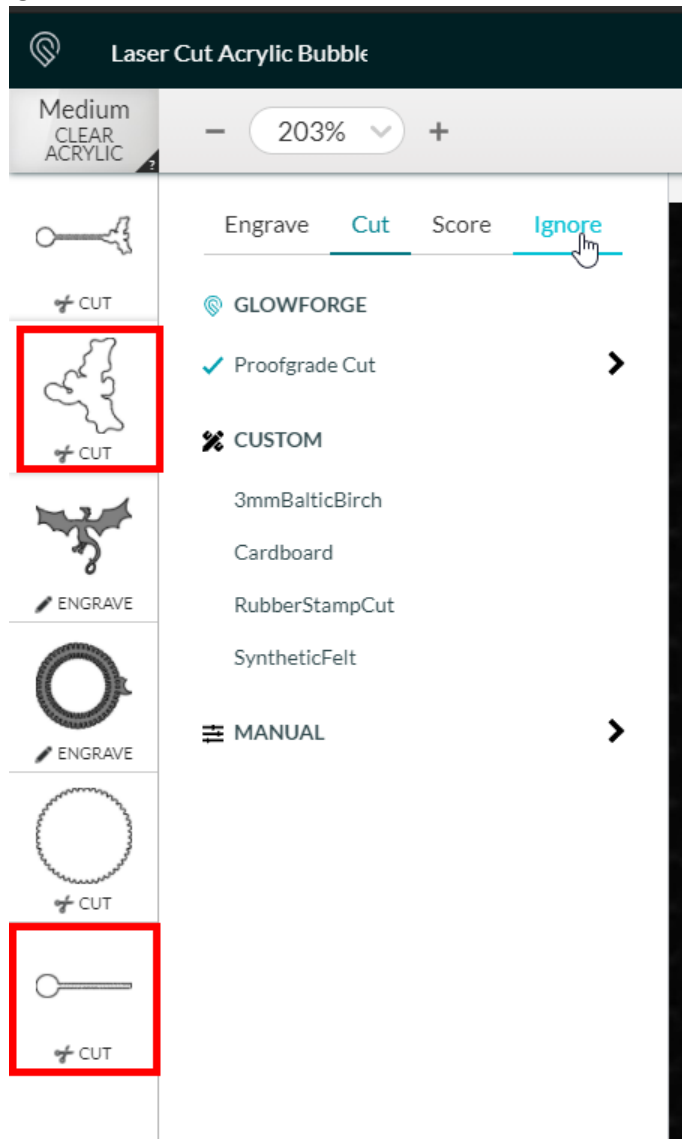

Rotate and scale to fit appropriately

Then select just your artwork and create new outline. I like 0.1in.

Select the handle of the bubble wand, and the outline you just made, then create a new outline. You can use 0.0 in or a very small negative number like -0.01in.
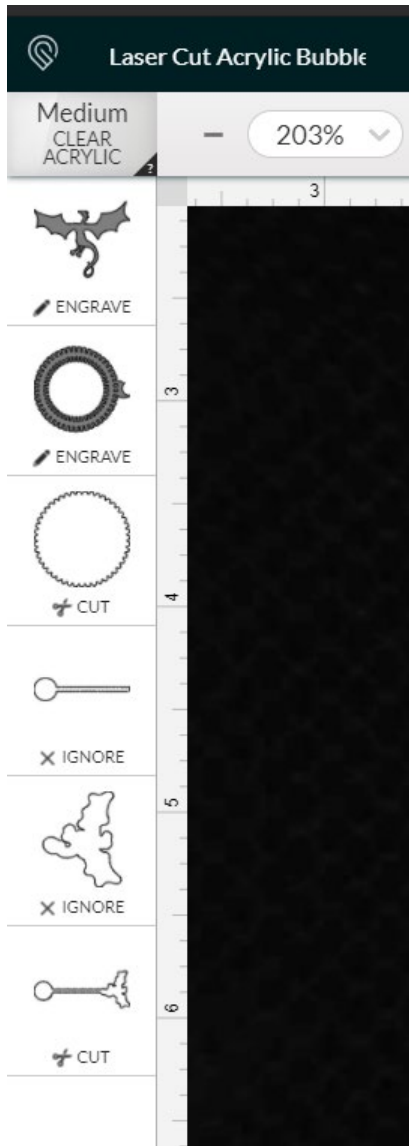

Select the outline of your icon and set it to Ignore.
Ignore the outline of the bubble wand as well.

Arrange the order of your operations until satisfied. I recommend starting with engraves, then inner cuts, then outside cuts.

Your operations should look something like this.

From here you know what to do with that magic print button!
